

Coverings & Interior design

Coverings - protection and design

Specially-developed floor coverings and roof coverings enable the arrangement of energy guiding systems in the side and roof sections of the folding bellows.

The floor coverings and roof coverings are manu-factured out of high-quality folding bellow material. Designed to fit in with the overall styling of the vehicle, they cover and separate the cabling from the passenger areas.

Interior design for articulated buses

Depending upon the vehicle design, HÜBNER offers a range of various interiors - solutions that are harmonised with one another in terms of design and technology.

Besides the classic interior design, we also create and produce roof coverings and covers - for attachment to the outside of the folding bellow - to provide for connecting cabling systems on specialised vehicles like e.g. trolley or gas-driven buses.
