

Folding bellows out of specially coated fabric

Folding bellows out of coated synthetic fabric with aluminium frames

High-quality materials with various elastomer and thermoplastic coatings that can be adapted to suit customer requirements in terms of colour and design: that is our concept for first-class products and satisfied customers. The deployment of modern-day materials such as Kevlar or TPE is something that can be taken for granted.

Depending upon the field of application, our fabrics are furnished with additional properties like UV resistance, low and high temperature stability as well as high tear, tear-growth and wear resistance.

Our products distinguish themselves on account of their long service life and quality.
