

PUR compact duromer & PUR integral HR foam

Hard, microcellular materials such as PUR compact duromer or PUR integral HR foam ensure a cost efficient production of tailor-made product ideas even for small production runs. The possibilities are manifold.

In close cooperation with our customers we design and manufacture products such as paneling parts for the medical field that can subsequently be equipped with custom surfaces to meet individual requirements.

Casings & paneling

Whether with decorative foil, coated or uncoated, in large or small sizes, different wall thicknesses, completely converted with bushings, hinges, recessed grips or the like - our spectrum of variations is extensive. We manufacture, e.g., casings and paneling for CT systems, analysis devices, X-ray tables, detector casings and detector arm paneling from PUR rigid foam.
