A car key is only one of many HÜBNER products

press review

Plastics processing 2006

HÜBNER develops, designs and manufactures high-quality products for the automotive industry, the electronics industry and medical technology. Together with the customers, from experience and creativity, market-driven solutions are created in plastics, made from almost any material: PA, PP, PC-ABS, PBT with up to 60 % of glass fibers, TPE, TPU, PUR, silicone and rubber. Always on time, HÜBNER company employees endeavor to answer even unusual and complex questions. The customer's decision process is supported right from the start of a project by a cost-benefit calculation. The most modern tools such as the usage of high-quality 3D-CAD systems (CATIA), mold-flow analyses, FEM simulations of ERP systems and a company-own tool making ensure short cycle times and efficient solutions. State-of-the-art production technology such as multi-component injection molding (2 K, 3 K) or the production of sealings made from rigid-soft combinations do not only yield a high-quality result but also save additional assembly work and ensure high process stability and low production costs. HÜBNER company offers everything starting from a singular unit to components and up to complete systems from one single source. With supplementary conditioning techniques such as laser marking, ultrasonic or hot embossing, the products are refined or personalized. This is how ideas take shape - in technology, design and service. HÜBNER company is one of the leading suppliers for technical industrial products. From the idea up to the start of production, products for the automotive industry, medical technology, railroad vehicles, buses, commercial vehicles, airport technology and leisure and sports are created in plants worldwide. The design and production of injection-molded products, rubber products, PUR-foam molded parts, door and window systems, folding bellows and vehicle articulation systems are among the core competences of HÜBNER company.
