

# Our window systems in detail

## Convenient replacement - appealing design

Every year public transportation services lose millions of Euros through scratching, breakage of glass or graffiti. Systems which enable quick replacement of the windows offer many advantages: They reduce idle times caused by repairs, reduce costs, do not require the interior to be dismantled, have a pleasing design and amortize in a minimal amount of time. See for yourself:

## Benefits at-a-glance

- minimizing of the maintenance costs related to the vehicle life
- pleasing design
- substantial cost reduction per window replacement
- high vehicle availability
- no prolonged idle times in repair
- easy change of the glazing from the vehicle exterior
- no cutting and bonding required
- no need to dismantle the interior
- minimal replacement time of the glazing
- high-quality, durable certified systems

## Amortization on the first window replacement

Front window systems only need to be replaced once per year; a quick-change window system pays for itself. After 30 years of using quick-change window systems, the total savings amount is approx. 160,000 Euros.

Side window systems pay off after the second year of use. A vehicle with a service life of 30 years can save a total of approx. 100,000 Euros.

### Amortisation front windows

total savings: ca. 160.000 Euro

At an exchange of 1 window per year an amortisation takes place after 1 year.

### Amortisation side window system

total savings: ca. 100.000 Euro

At an exchange of 4 windows per year an amortisation takes place after 2 years.
