

# Plastic-injection molded products

## Think, design and manufacture in plastic

You will experience what HÜBNER can achieve with plastics. We will open new ways into the future for you with experience, competence and the most advanced manufacturing technology - such as multicomponent injection molding, gas injection technology, foam injection molding or in mold decoration. We develop, design and manufacture high-grade products from

- technical thermoplastic resins
- thermoplastic elastomers or
- liquid silicones.

We combine different types of plastics, blend thermoplastics and thermoplastic elastomers (hard-soft-compounds). By applying modern manufacturing technology we can forgo singular production steps and components; this saves costs and reduces sources of error. Thanks to our practice and close customer relations we are able to develop technically perfect, high-grade products for the automotive and other industries.
