A potential for costs reduction: vehicle glazing

Neat and modern vehicles are the figurehead for every vehicle operating company. Appealing design and equipment; this is how you safely take your passengers where they need to go. Satisfied passengers ensure a higher utilization and contribute to the economic efficiency of public transportation services.

Due to an increasing tendency to vandalize such as scratched window panes, breakage of glass or graffiti, the exterior and interior appearance of the vehicle is affected. Every year public transportation services lose millions of Euros through idle times caused by repair of the aforementioned damages and the replacement of windows.

Quick-change window systems substantially reduce idle times which normally occur on the replacement of damaged window panes and increase the economic efficiency of the vehicles.
