

EXEO II

Fully automatic lift systems ensure hindrance-free travel in high-floor buses and coaches. Ergonomic and easily integrated, the lift system can be fitted in the luggage compartment of the vehicle. All drive units are integrated into the lift, thus enabling easy installation in the vehicle. The lift complies with EC guideline 2001/85.

The EXEO Lift System removes obstacles to bus travel for people with restricted personal mobility. The new lift system EXEO II distinguishes itself from its predecessor model with its ergonomic handrails. The lift is fully automatic and is controlled via a simple to use remote control unit.

- Kinematic operation for bridge plate and handrails
- Easy maintenance
- Customised lifting height of up to 1110 mm
- Easy installation in the vehicle
- Weight: approx. 250 kg
- Load capacity: 300 kg
- Platform size: 1230 x 830 mm
- Acceleration when raising/lowering: < 0.2 g
